SUMMARY

AI/ML engineer with 7 years of experience taking models from research to production. Currently Senior Principal Data Scientist building enterprise LLM agents, RAG search and computer vision / anomaly detection for battery manufacturing. Background in MLOps and full-stack development (Angular, .NET), so I can own a solution end to end, from data to deployment to user adoption.

EXPERIENCE

Senior Principal Data Scientist · ***Enovix Corporation*** *Jul 2025 – Present*

- Built enterprise AI agents (SPEC/MEMO, Document Control) using LLMs, RAG and vector search, so engineers find answers across 10,000+ technical documents in under a minute.
- Work on C2A, a battery electrode misalignment detection system, using machine learning and template matching algorithms on laser line-scan data, with an interactive app for engineers to review flagged cells and validate in shadow mode before production rollout.
- Help administer Claude Enterprise, ChatGPT Enterprise and GitHub Copilot company-wide, covering access control and budget caps.
- Help drive AI projects across the full lifecycle, from architecture to deployment, monitoring and adoption.

Lecturer (Part-time) · ***Tunku Abdul Rahman University of Management & Technology*** *Jul 2024 – Jun 2025*

- Taught Python, Java, UI/UX and SDLC to 130 students per semester, and designed exam paper questions.
- Mentored student teams in building and deploying websites that integrate machine learning use cases, from model to working web app.

Machine Learning Engineer · ***Intel Corporation, Penang*** *Apr 2022 – Jun 2024*

- Built an end-to-end MLOps framework (CI/CD, monitoring, automated deployment) that became the team standard and enabled model deployments within 3 hours.
- Developed anomaly detection for collateral life assessment in assembly and test manufacturing, optimizing part replacement decisions to reduce cost.
- Built predictive models for new-part values, improving forecasting accuracy and supporting cost decisions.
- Delivered a production Angular/.NET web platform that let the ML team and stakeholders deploy, test and monitor models without engineering support.

System Software Developer · ***Plexus Corp.*** *Sep 2019 – Apr 2022*

- Researched and prototyped computer vision and deep learning solutions for internal efficiency: OCR for printed characters, automatic license plate recognition (object detection and image processing), template matching, and A* indoor navigation.
- Evaluated technical feasibility of ML.NET and Trill for internal use.
- Built the front end of an internal procurement system (JavaScript, .NET Framework), adopted by engineering teams to order factory parts, working closely with UI/UX designers and backend developers.

Data Scientist (Intern) · ***Jabil*** *Feb 2019 – Jun 2019*

- Reported to the IT Director; drafted a data ethics guideline for staff doing analytics and visualization.
- Applied Python, text mining and NLP to classify urgency levels for EHSIP department incident tickets.
- Supported migration of dashboards from Tableau to Power BI.

SKILLS

- **GenAI & LLMs.** RAG, vector search, agent workflows, prompt engineering, MCP, model evaluation
- **Machine Learning.** Deep learning, NLP, computer vision, template matching, anomaly detection, model validation
- **Cloud.** Azure (Blob Storage, AI Search), Python
- **MLOps.** CI/CD, model monitoring, Dev/Test/Prod management
- **Full-stack.** Angular, .NET, Java, JavaScript, UI/UX
- **AI Governance & Ops.** Enterprise AI platform administration, access control (SCIM)

EDUCATION & LEADERSHIP

Bachelor in Mathematics with Computing · *Tunku Abdul Rahman University of Management & Technology* · 2017 – 2019 · **Graduated with Distinction**

Final year project: Singular Value Decomposition on a recommendation system (1M × 7,000 dataset).

- Neural Networks and Deep Learning · *DeepLearning.AI*
- President, TAR UC Computer Science Society (2015 – 2017) — led a team running coding competitions, a leadership camp and an Industry 4.0 talk.
